Summary:

Motivated Computer Science Engineering student with hands-on experience in IT support and a growing background in software development and software testing. Skilled in troubleshooting, system analysis, and identifying recurring issues, with a strong interest in simulation systems and improving product usability. Currently expanding my knowledge in cloud computing technologies, with a focus on modern cloud infrastructure and architecture. Fast learner, detail-oriented, and effective in team environments, with the ability to cooperate closely with developers and partners.

Projects and qualifications:

A- Currency & Unit Converter (Demo on Portfolio)

- Developed a comprehensive web application for converting currencies and various measurement units (length, weight, temperature, etc.).
- Integrated external APIs to provide real-time currency exchange rate updates.
- Designed a responsive user interface using HTML, CSS, and JavaScript.
- Implemented dynamic data handling and API communication for accurate and up-to-date conversions.
- Focused on usability and performance optimization for a smooth user experience.

B- QR Code Generator Tool (Demo on Portfolio)

- • Built an interactive web tool for generating customizable QR codes.
  - Implemented features for color customization, resizing, and multiple download formats.
  - Utilized JavaScript along with QRCode.js and Canvas API for dynamic QR code generation.
  - Designed a clean and responsive UI for improved accessibility and user experience..

C – Travel Search Website (Demo on Portfolio)

- Developed a travel search platform enabling users to explore flight and hotel options.
- Integrated APIs to retrieve and display travel data dynamically.
- Built the frontend using HTML, CSS, and JavaScript, with backend logic using Node.js.
- Implemented filtering and structured data presentation for enhanced user interaction.

D – AI IT Support Q&A (.NET Console Application)

- Developed an AI-powered IT support assistant using C# and .NET.
- Implemented keyword matching to retrieve relevant information from a local knowledge base.
- Integrated an LLM API to generate contextual and intelligent responses.
- Focused on troubleshooting automation and improving IT support efficiency.

E – Web Security Scanner v2.0 (Python Application)

- Developed a Python-based web security scanner to analyze website security configurations and identify potential vulnerabilities.
- Implemented automated checks for HTTPS usage and essential security headers including X-Frame-Options, Content-Security-Policy, Strict-Transport-Security, and X-Content-Type-Options.

• Built basic TCP port scanning functionality using Python sockets to detect exposed common network ports.
• Designed a risk evaluation system classifying scanned websites into Low, Medium, or High security risk levels.
• Focused on cybersecurity fundamentals, automation, and practical network analysis concepts.

Experience

Technical Support Specialist, Unisys Company

Budapest, Hungary | 2023 – Present

• Provide bilingual (English/French) technical support in an enterprise corporate environment, handling hardware, software, and network-related incidents.
• Manage user accounts, permissions, and security configurations within Active Directory and Azure Active Directory environments.
• Troubleshoot Windows OS, Microsoft 365 services (Teams, Outlook, SharePoint), and enterprise applications using ServiceNow and Jira for incident tracking and resolution.
• Support network connectivity issues including TCP/IP, DNS, DHCP, VPN, and remote access solutions.
• Collaborate with internal teams to identify recurring technical problems, document root causes, and contribute to knowledge base improvements

IT Support Level 2, Ooredoo Company
Algiers, Algeria | 2022 – 2023

• Provided second-level (L2) technical support, handling escalated software, system, and network-related issues.
• Performed advanced troubleshooting of operating systems and internal service platforms to identify root causes and implement long-term solutions.
• Investigated recurring incidents, analyzed system logs, and collaborated with technical teams to resolve complex application and connectivity problems.
• Assisted in resolving software-related issues, including configuration adjustments and basic debugging tasks when required.
• Documented solutions and investigative steps to improve internal support processes and reduce repeated incidents.

Skills

Operating Systems: Linux, Windows Databases:
SQL,
Programming Languages: Java, C#, CSS, HTML, JavaScript, React.js
Cloud Platforms: Amazon Web Services (AWS), Google Cloud Platform (GCP), Microsoft Azure
Troubleshooting, Networking :Cisco switching and routing TCP/IP, DNS, DHCP , application-level debugging ,

Education

Bachelor's Degree in Computer Science Engineering (Software Development) Dunaújvárosi Egyetem | Hungary | 2024 – 2027

Technical Sciences Major
Abdelmoumen High School | Rouïba, Algiers | 2019 – 2022

Certifications

- the complete JavaScript course
- Responsive web design
